

# Compostable & Anaerobic Digestion

We supply a range of compostable caddy liners in all standard sizes that can support food waste management strategies. Manufactured from EcoPond® biodegradable plastic, using starch and lactide-based derivatives of plant sources, these products are fully compliant with the European composting standard, which requires more than 90% of the plastic mass to convert into biomass, CO<sub>2</sub> and water, with no harmful residue. Sacks fully decompose within the normal 6-10 week composting cycle and are accredited to meet the stringent composting standard EN13432.

Code	Description	Size (mm)	Size (inches)	Packing	MNBW
Compostable Liners					
COMP5	5L	(200)x360x365	(8)x14x15	2000 pcs/carton (80 rolls x 25 pcs)	6.75
