Why Choose **LOWCO2T**™?

Our LowCO2t™ products are engineered to provide maximum performance using minimal resources. This not only helps to reduce the volume of plastic used, it also helps by cutting carbon emissions during production and transportation.

This trailer holds 21 pallets (504,000 sacks) of CHSA accredited LowCO2t™ product. Totalling 13 tonnes of product.

Conventional product at the same size and performance would require 31 pallets and an additional 3 tonne of material. Saving 10 pallet spaces and the cost of another delivery.

Choosing LowCO2t™ saves valuable resource, reduces haulage costs, saves storage space, and lowers CO₂ emissions from transport.

Benefits of LowCO2T

- Lower greenhouse gas emissions = Lower CO₂
- More on a pallet
- Less plastic
- Attractive white carton
- All standard colours are available from stock
- Minimum of 30% recycled material
