

HOW TO IMPROVE

YOUR RECYCLING

WASH IT

Washing your recycling before disposing of it stops the spread of contamination.

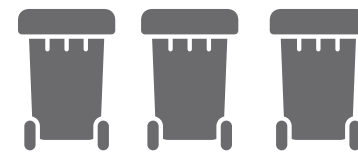

COMPRESS

Crush and flatten your recyclables, this task helps during reprocessing and also gives you extra room in your bins.

CORRECT BIN

Always ensure you have put the item in the correct bin - not doing so can contaminate the whole bin, deeming it unrecyclable.

REMOVE LABELS

Loose stickers can damage the machinery during reprocessing.

RESEARCH

If you are ever unsure whether an item can be recycled or not, or which bin it belongs in, just look it up!

The UK government is set on implementing regular and separate collections of food waste from every home and business, which, it says, will boost recycling levels across the whole country.
